

Give every rupee a job.

Turning Jar's silent savers into active users, without breaking the saving habit

The recommendation: Goal Jars with Squads, Monday Brand Boosts and a Sunday Wrap

Give every rupee a job: Goal Jars give students 2–3 genuine reasons a week to open Jar, while saving stays 100% automatic

THE PROBLEM IN ONE LINE

Jar automated every decision except the one it doesn't want users to make. Today the only meaningful in-app action is to withdraw.

DIAGNOSIS

~12.5%

of 35M registered users save in a given month [D]

- Value is delivered outside the app: round-off in the UPI app, silent AutoPay debit
- Balance shown in grams: ₹3 buys <0.3 mg; gold dips trigger the ostrich effect
- No goal, no squad, no decision: the only action left is “sell”, the topic of 56% of detailed 1–2★ Play Store reviews [S29]

RECOMMENDATION

0

extra steps added to the saving path

- Goal Jars: split gold into named goals; the idle balance becomes a head start
- Squad Jars: friends save toward a shared trip, with no pooled money
- Monday Brand Boosts + Sunday Wrap create 2–3 meaningful opens a week

BUSINESS IMPACT

₹8.5 Cr

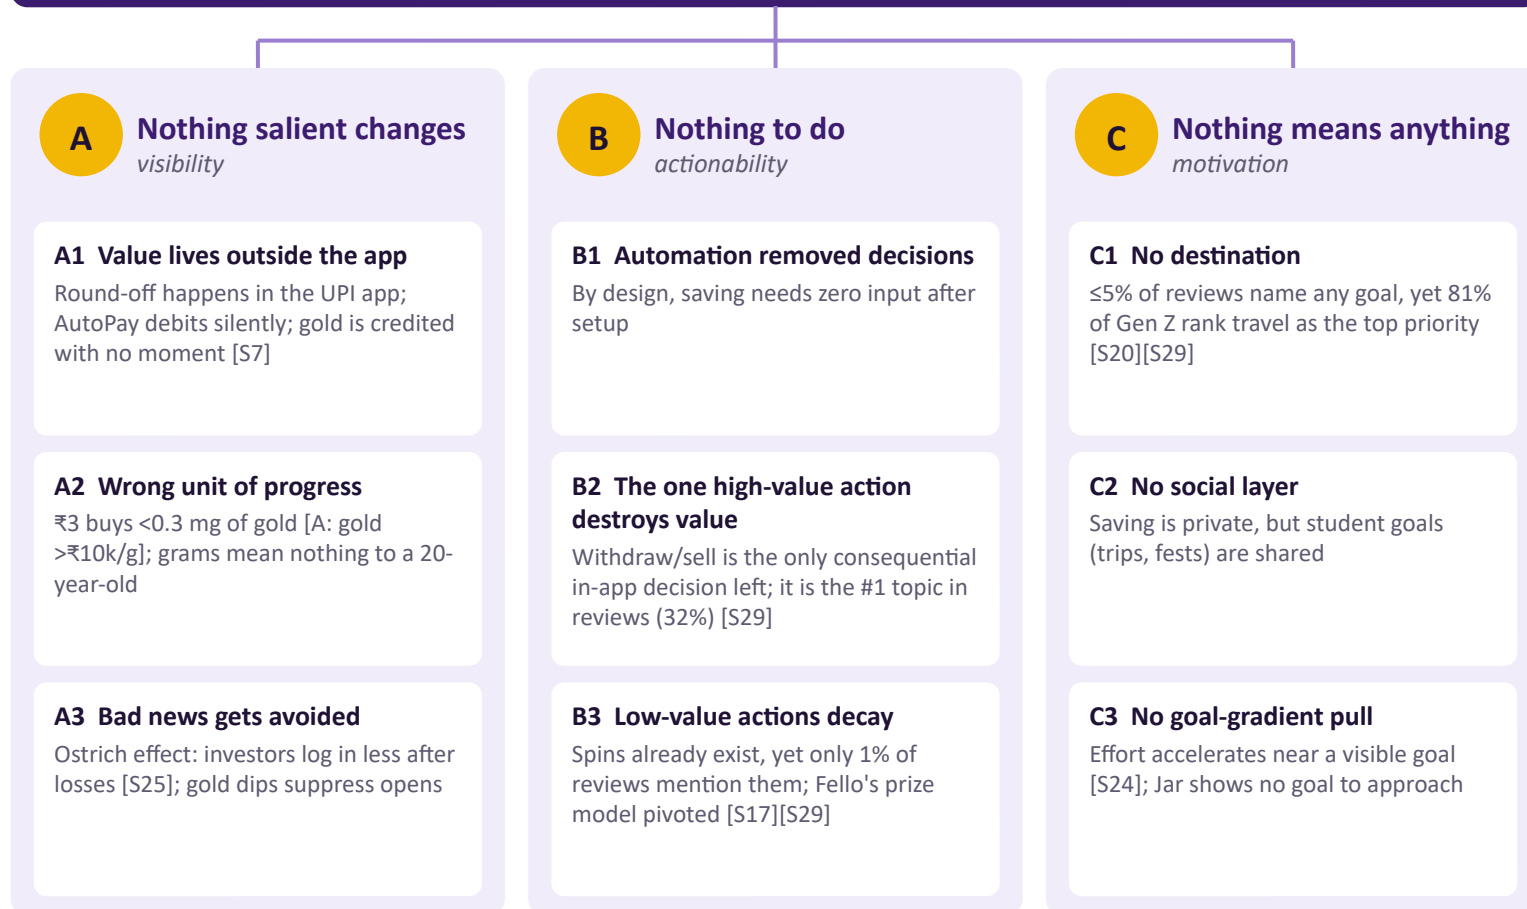

3-yr incremental net (base) · 52% ROI

- Payback ~20 months; LTV/CAC 3.8x; break-even at 21% adoption
- Defends ~₹25 Cr/yr of student margin as payment apps copy the gold-on-every-payment mechanic
- North Star: Weekly Goal-Engaged Savers, 210k by month 12

The ask: approve an 8-week MVP + an 80-campus pilot. ≤₹1.6 Cr at risk; hard go/kill gates on engagement and auto-save volume.

There is no reason to open Jar: nothing visibly changes, nothing needs deciding and the savings have no purpose. Withdrawing is the only real action

Why does a passive saver have no reason to open the app?

CORE INSIGHT

Jar automated every decision except the one it doesn't want users to make: withdraw.

So opening the app and growing savings pull in opposite directions. The fix is decisions that grow in value as the balance grows.

6.8%

of registered users saved monthly (Mar 2024) [D: S5]

56%

of detailed 1–2★ reviews are about withdrawing and getting back less (n = 408) [S29]

WHAT IT IS NOT

- ✗ **Trust or quality:** 4.7★ from 112k ratings [S10]
- ✗ **Missing gamification:** spins already exist [S7]
- ✗ **Gen Z dislikes gold:** they see it as a digital asset [S22]

Near-goal students are the lever, and Goal Jars beat six alternatives on fit, saving-safety and defensibility

WHO MATTERS MOST

-  **1.75M active-saving students** = 35M [S1] × 40% students [A] × 12.5% active [D]
-  **81% of Gen Z rank travel most important** [S20]: short, social, concrete goals
-  **Paytm now gives gold on every payment** [S13]: Jar's moat must move from mechanic to meaning

SEVEN OPTIONS SCORED (1 = poor, 5 = best)

Option	Impact	Feasibility	Fit to diagnosis	Originality	Saving-safe	Defensible	Total / 30
A. Goal Jars + Squad Jars · CORE	5	4	5	3	5	4	26
B. Brand Boosts · LEVER	4	3	4	4	5	4	24
C. Sunday Wrap · LEVER	3	5	4	3	5	2	22
D. Streaks + campus leagues	3	4	2	2	4	2	17
E. Campus gold-cashback	3	2	3	2	5	2	17
F. Bigger prize games / spins	4	3	1	1	4	1	14
G. Gold+ leasing yield	2	2	2	1	5	1	13

Why the others lose

D: streaks on automatic saving are unearned, so they're hollow (Duolingo works because users act [S26]).

E/F: already copied (Paytm Gold Coins [S13]) or already in Jar (spins); Fello's prize economics failed [S17].

G: Gullak already offers it [S15]; it raises regulatory exposure after SEBI's Nov-2025 advisory [S8] and creates no weekly reason to open.

Recommend Goal Jars with Squads, boosted by brands and recapped every Sunday, adding zero steps to saving

① Goal Jars + Squads (core)

My Jars

Rishikesh trip · Squad of 4

58% · ₹2,320 of ₹4,000 · 1 wk ahead

New phone

22% · ₹3,300 of ₹15,000

Forever Jar (long-term)

₹1,850 in 24K gold · untouched

+ New jar (12 templates)

Idle balance seeds the first jar → 30% head start

② Monday Boost Drop (lever)

Boost Drop · Mon

Hostel partner*

+₹20 gold to your Rishikesh Jar if the squad hits 50% by Sunday

Claim boost

Bus partner*

5% bonus when you redeem this jar for tickets

RKAM

Squad at 46%

*illustrative partner categories; brand-funded

③ Sunday Wrap (lever)

Your week

₹236

saved automatically: 14 chai round-offs + 7 daily saves

Rishikesh Jar 58% · 1 week ahead of plan

Gold price –₹12 this week; your saving still moved you +6%

Keep plan

+₹10/day

Share story ↗

ZERO-FRICTION PROOF

Saving step	With Goal Jars
UPI spend detected	Unchanged
Round-off + daily save	Unchanged
UPI AutoPay debit	Unchanged: no new mandate or KYC
Gold credited	Tagged to a jar by a one-time rule
User never opens Goal Jars	Identical experience (opt-in)

SAFE AND SMART BY DESIGN

No pooled money: each squad member owns their own gold, which avoids 'unauthorized collection' risk [S4]

Asset-agnostic ledger: a jar can hold gold ETF or fund units if digital gold is restricted [S8]

Forever Jar partition protects long-term savings (partitioning +72% savings [S23])

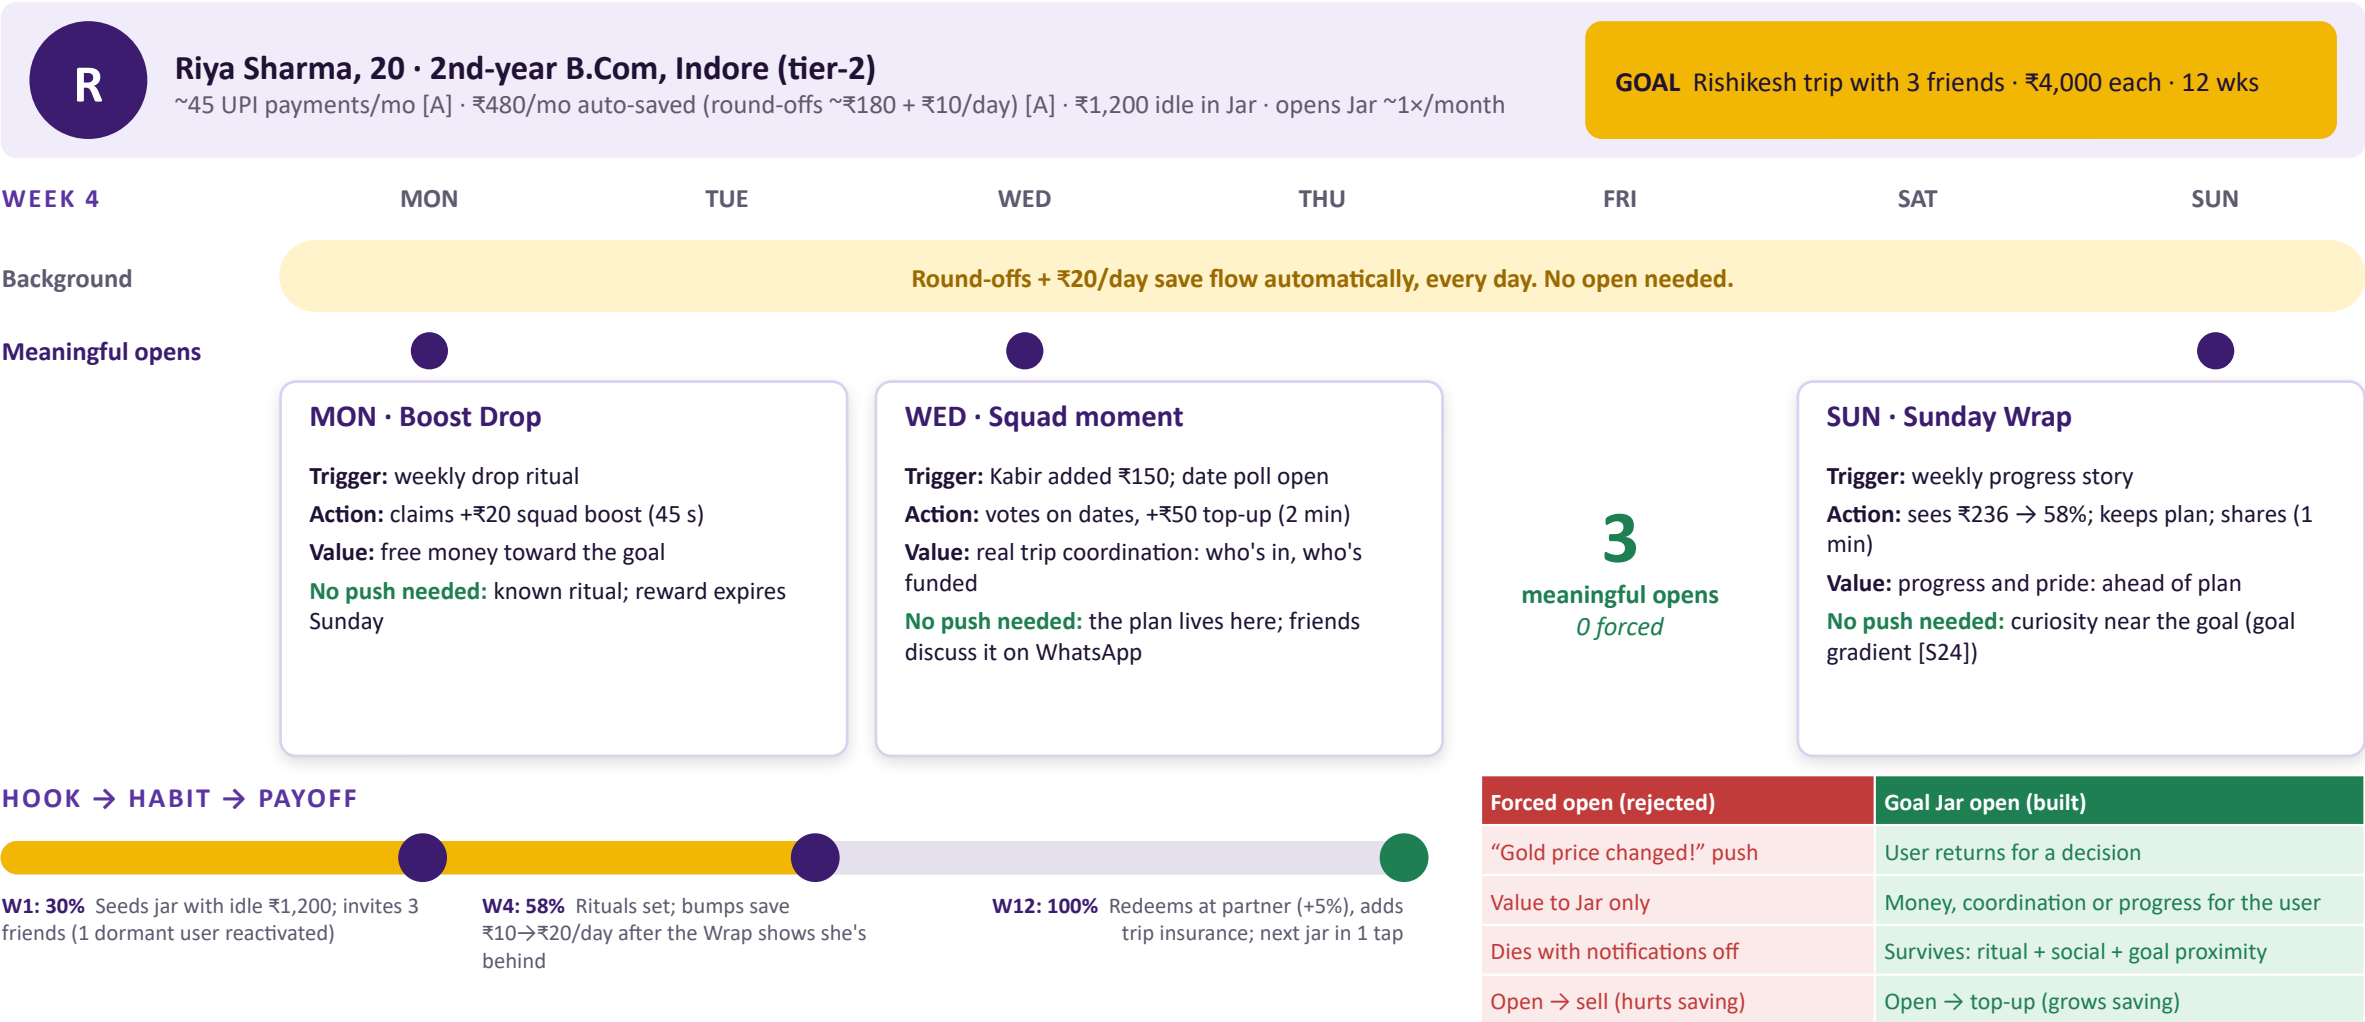

Partner-funded boosts (Acorns model [S27]); Jar subsidy capped at ₹25/user/yr

Fixes the most painful moment: withdrawal, where users meet 3% GST + a 2–5% spread [S30], becomes goal redemption with a partner bonus

Extends existing Jar features (round-off, daily save, Nek, gifting, insurance); duplicates none. Redemption can route to Nek jewellery or gold gifting. S4 Entrackr · S8 SEBI advisory Nov 2025 · S23 Soman & Cheema 2011 · S27 Acorns Found Money · S30 digital gold charges explainer.

4

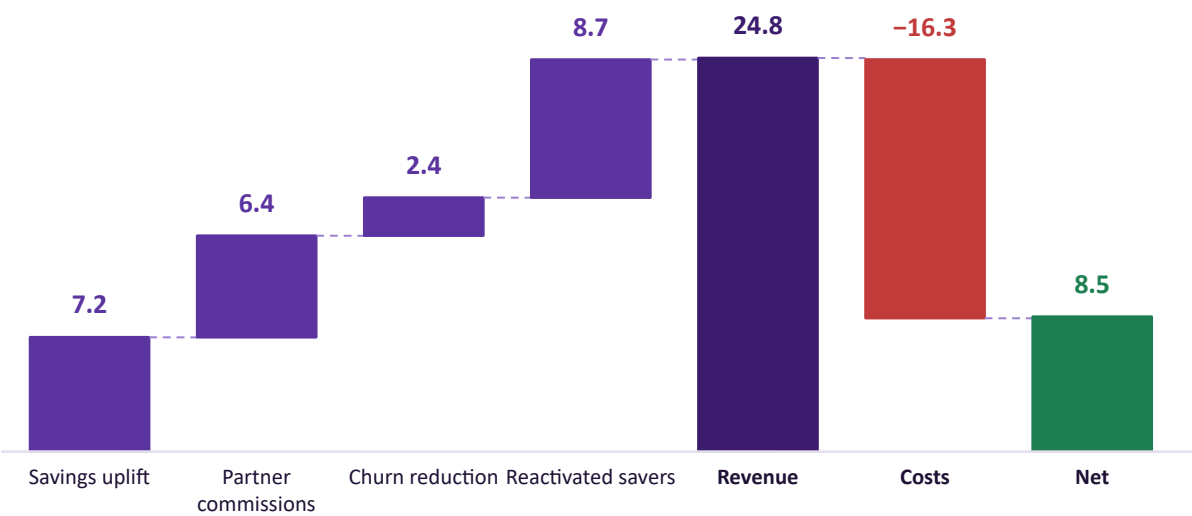

Riya opens Jar three times a week because she has decisions to make, not because notifications nag her

Persona numbers are illustrative [A]: round-off ≈ ₹4 avg (uniform 0–9 to the nearest ₹10) × 45 payments; week-4 run-rate ≈₹235/wk = ₹20/day + round-offs + boosts + optional top-ups. S24 Kivetz et al. 2006 (goal gradient, endowed progress).

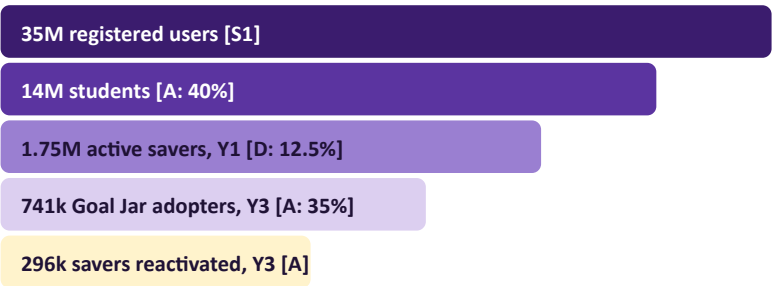

Base case returns ₹8.5 Cr net over three years with a ~20-month payback, and a pilot gate caps the downside at ₹1.6 Cr

3-YEAR INCREMENTAL VALUE, BASE CASE (₹ Cr)

Not counted: ~₹25 Cr/yr of student margin defended against copycats [D]

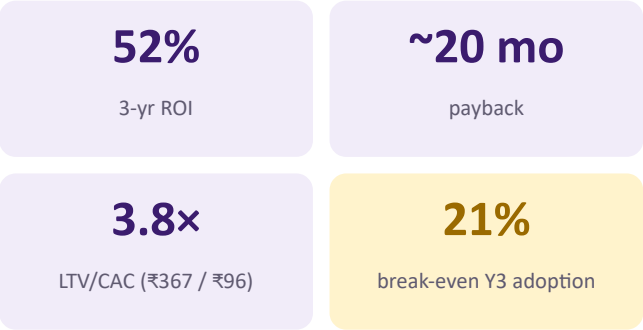

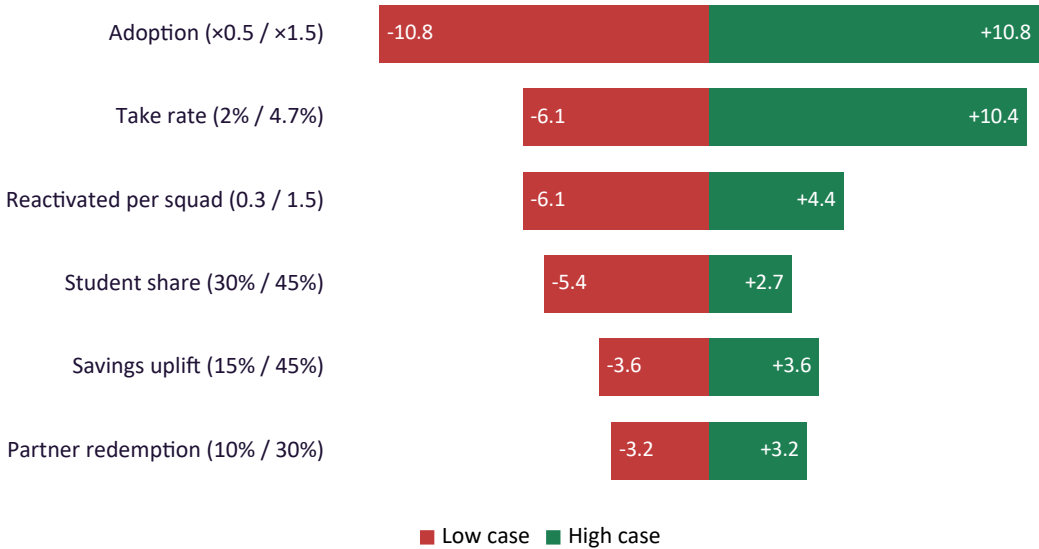

FUNNEL (BASE)

	Bear	Base	Bull
3-yr revenue	₹3.6 Cr	₹24.8 Cr	₹96.4 Cr
3-yr cost	₹14.5 Cr	₹16.3 Cr	₹18.3 Cr
3-yr net	-₹10.9 Cr*	₹8.5 Cr	₹78.1 Cr
ROI	-75%	52%	428%
LTV/CAC	0.4×	3.8×	13.5×

*Bear stacks every adverse input; the pilot gate stops it at ≤₹1.6 Cr spent

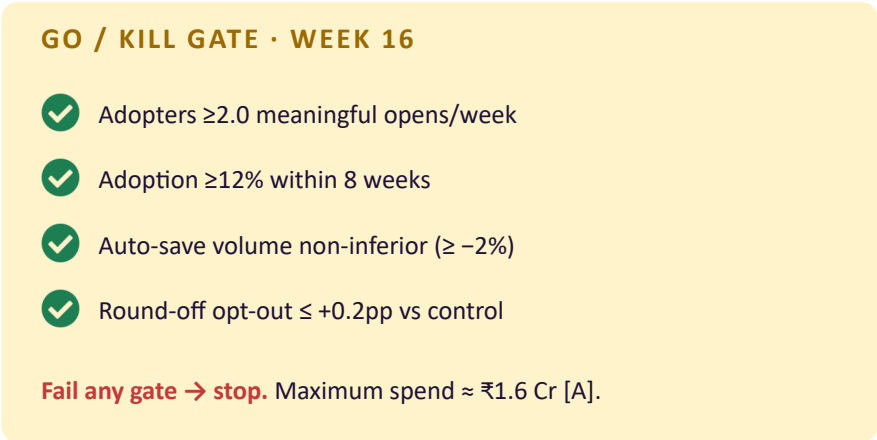

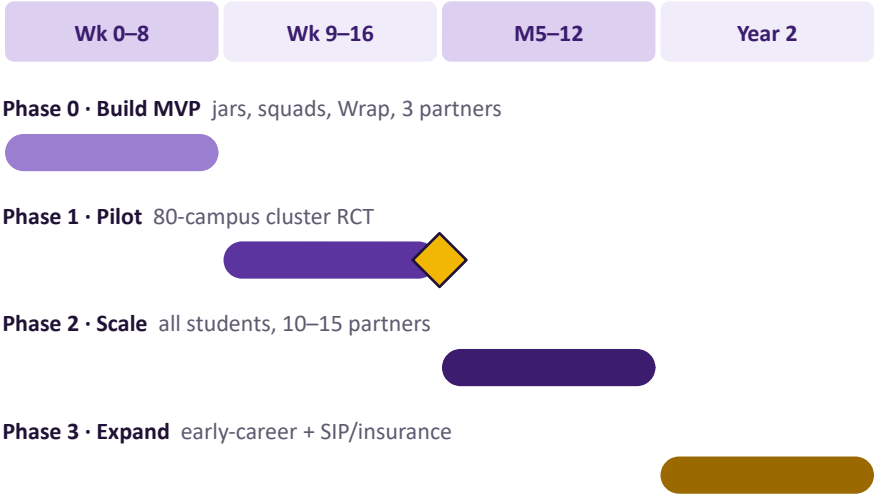

SENSITIVITY: CHANGE IN 3-YR NET VS BASE ₹8.5 CR

One North Star, four guardrails and one go/kill gate decide whether Goal Jars scale

ROLLOUT

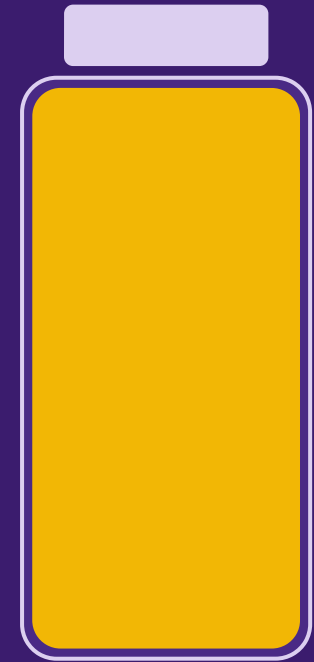

Baselines marked [A] should be replaced with Jar internal data at kickoff. Targets derive from the Slide 6 base case: 210k WGES = 60% of 350k Y1 adopters.

Thank you

Give every rupee a job, and students will have a reason to come back for it.

Team HAVOC · CV Raman University

Goal reached

Every assumption, its value and the logic behind it

#	Input	Base (bear / bull)	Tag	Logic / source
1	Registered users	35M	S	TechCrunch / Entrackr, FY25 [S1][S2]
2	Student share of users	40% (30 / 45)	A	Problem statement: students are the “largest user base” → plurality
3	Monthly active saver ratio	12.5%	D	Mar-24: 1M txns/day ÷ 22 saves = 1.36M savers / 20M (6.8%) × FY25 txn growth 3.21× ÷ user growth 1.75× [S3][S5]
4	Active saver growth	10%/yr	A	Conservative vs +221% FY25 transaction growth [S3]
5	Goal Jar adoption, Y1/Y2/Y3	20/30/35% (10/18/22; 25/40/45)	A	Share of active-saving students with ≥1 jar; break-even at 21% in Y3
6	Baseline saving per active student	₹400/mo (300 / 500)	D	~₹2,350 Cr gold GMV (₹2,450 Cr less ~₹100 Cr Nek) ÷ ~4.4M savers ≈ ₹445; students lower [S1][S3]
7	Savings uplift from goals	+30% (15 / 45)	A	Earmarking + partitioning +72% in an Indian field study [S23]; haircut >50% for digital, voluntary use
8	Jar take on gold purchases	3% (2.5 / 4)	A	Below the 4.7% blended FY25 gross margin incl. Nek: (₹2,447.8 – ₹2,333.6 Cr) ÷ ₹2,447.8 Cr [S3]
9	Squad creators / reactivated per squad	40% / 1.0 (0.5 / 1.5)	A	Avg squad of 4; ~1 member was dormant or new
10	Goals/yr · partner redemption · goal size · commission	1.2 · 20% · ₹4,000 · 4%	A	Short student goals; typical Indian travel/e-com affiliate range 3–8%
11	Annual survival: base vs adopters	55% → 65% (60 / 70)	A	Goal holders re-engage after rewards [S24]; ~5%/mo churn baseline
12	Reactivated saver survival	60%/yr	A	Social commitment within the squad
13	Build / run cost	₹3.0 / 1.8 / 1.8 Cr	A	10 FTE × ₹30L loaded in Y1; 6 FTE run
14	Marketing (campus ambassadors, content)	₹2.5 / 2.0 / 2.0 Cr	A	~5% of FY25 ad spend of ₹48.5 Cr [S3]
15	Jar-funded boosts · variable cost	₹25 / 12 / 8 · ₹6 per adopter	A	Partners fund the rest after the pilot (Acorns model [S27])
16	Pilot maximum loss	≈ ₹1.6 Cr	A	4 months of the Y1 build budget plus pilot boosts and marketing

Base case by year, unit economics and scenario definitions

Base case	Y1	Y2	Y3	3-yr
Goal Jar adopters	350k	578k	741k	—
New reactivated savers	140k	231k	296k	667k
Revenue: savings uplift	1.51	2.49	3.20	7.2
Revenue: partner commissions	1.34	2.22	2.85	6.4
Revenue: churn reduction	0.50	0.83	1.07	2.4
Revenue: reactivated savers	1.01	2.87	4.86	8.7
Incremental net revenue	4.37	8.42	11.97	24.8
Total cost	6.58	4.84	4.84	16.3
Net	−2.22	+3.58	+7.13	+8.5

Unit economics (Y1 cohort)	Value
CAC per adopter (marketing + boost subsidy)	₹96
Net margin per adopter per year	₹78
Expected adopter life (1 ÷ (1 – 65%))	2.9 yrs
Squad reactivation value per adopter	₹144
LTV per adopter	₹367
LTV / CAC	3.8×
Y3 run-rate as % of FY25 operating revenue (₹208 Cr)	5.8%

Reproducible: `model/jar_goal_jars_model.py`

Scenario	Key inputs	3-yr net	ROI
Bear	30% students; adoption 10/18/22%; ₹300/mo; +15% uplift; 2.5% take; 0.5 reactivated/squad; 10% partner redemption	−₹10.9 Cr (≤₹1.6 Cr after gate)	−75%
Base	As in A1	₹8.5 Cr	52%
Bull	45% students; adoption 25/40/45%; ₹500/mo; +45% uplift; 4% take; 1.5 reactivated/squad; + early-career from Y2	₹78.1 Cr	428%

Round-off is being copied; goals, brand funding and user action are what worked elsewhere

Player	Round-off?	Engagement hook	Implication for Jar
Paytm [S13]	No; Gold Coins = 1% of every payment (2025)	Rewards at payment	The gold-on-every-payment mechanic is already copied
PhonePe [S6][S14]	Digital gold from ₹5; Jar-powered daily savings	Payments utility	Partner and potential rival
Gullak [S15]	Auto-save gold	Gold+ leasing yield	Yield ≠ weekly reason to open
Spare8 [S16]	Yes, round-up from ₹1	Daily rewards	Small (\$770K pre-seed)
Fello [S17]	Gamified saving	Games + prize pools	Pivoted to advisory: prizes unsustainable

Analogue	Evidence	Worked / failed · why
Soman & Cheema 2011 [S23]	Indian labourers: earmarking + 2 envelopes → +72% savings	Worked: labels and partitions create meaning and a barrier to spending
Kivetz et al. 2006 [S24]	Pre-stamped cards complete faster; re-engagement after reward	Worked: endowed progress and the goal gradient
Duolingo [S26]	DAU/MAU 34.7%; 10M+ users on 1-year streaks	Worked because the user acts; automatic streaks would be hollow
Acorns Found Money [S27]	450+ brands invest 1–10% of purchases	Worked: brand-funded saving
Monzo Pots [S28]	~350k new pots/month	Worked: people want named buckets
Sicherman et al. 2016 [S25]	Investors check less after losses	Risk: design around the ostrich effect

Risks, likelihood, impact and mitigation

Risk	Likelihood	Impact	Mitigation
Digital gold regulation (SEBI advisory, Nov 2025 [S8])	Medium	High	Asset-agnostic jars (gold ETF / fund units via partner); boosts are marketing, never promised returns
Pooled-money / unauthorized collection claims [S4]	Low	High	No pooling: each member owns their own gold; the squad is a shared view only
AUM drain when goals are redeemed	Medium	Medium	Jar earns on flows; Forever Jar partition; carry-10%-forward default; next-goal prompt
Reward-cost blowout (Fello precedent [S17])	Low	Medium	Partner-funded boosts; Jar subsidy capped ₹25 → ₹8 per adopter per year
Social pressure / privacy in squads	Medium	Medium	Show % only; amounts private by default; leave anytime; no money leaderboards
Copy by PhonePe / Paytm / GPay	High	Medium	Squad network + campus partner density + speed; Jar is PhonePe's gold back-end, so co-opetition is possible
Gold price dip mid-goal	Medium	Low	Progress shown in goal units from contributions; price effect shown separately
Students and debt	—	High	No credit cross-sell to students; only insurance at goal checkout

A 3-minute student survey and 8 interviews test the assumptions that move the case most

METHOD

Survey
Anonymous Google Form, ~25 questions, 3 min.
Jar users get an extra branch.

Sample
60+ students across 4–5 colleges; metro and tier-2/3 mix (60% of Jar users are outside metros [S1]).

Interviews
8 × 15 min with volunteers from the survey.

Reading results
Stated intent overstates behaviour, so intent is halved [A] before it is compared with model inputs.

Interview prompts

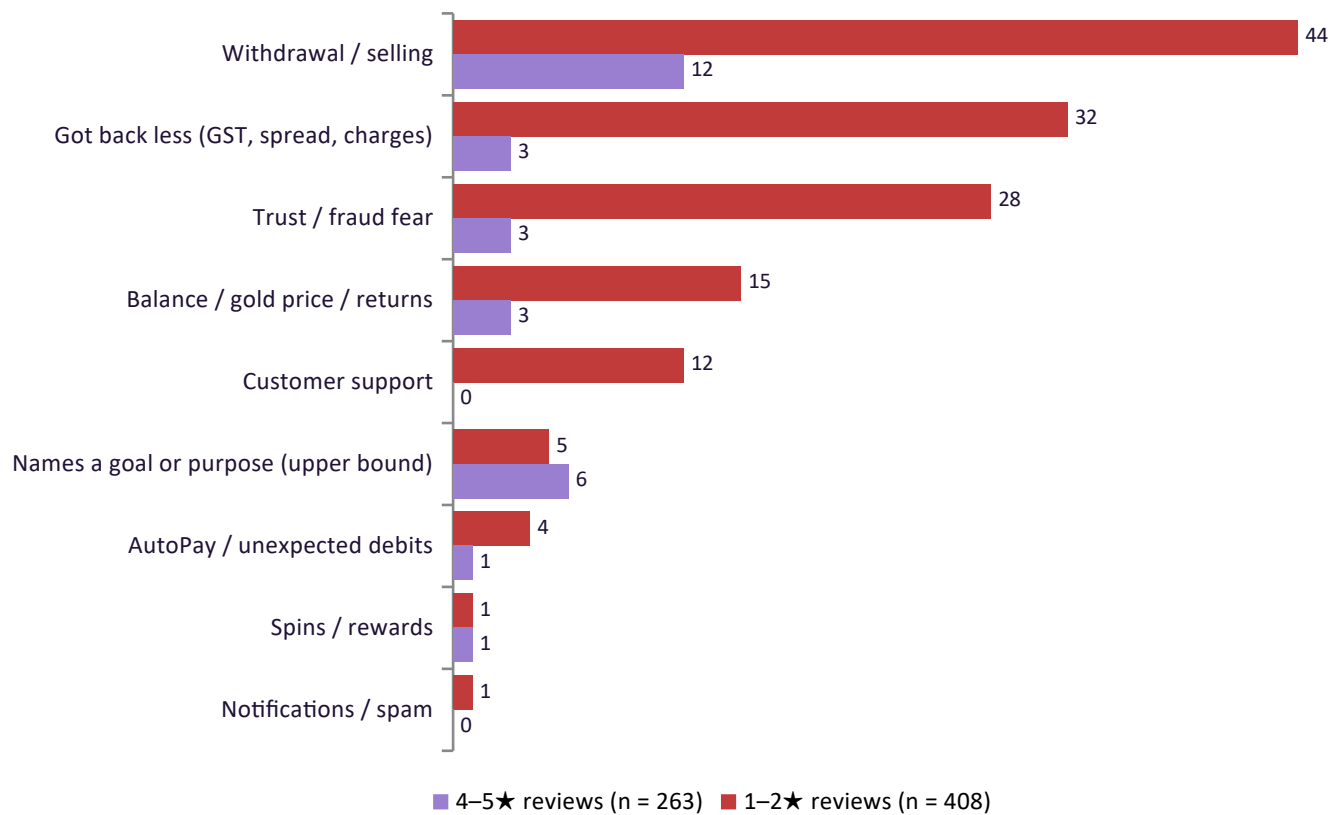

- 1. Walk me through your last 3 money-app opens. Why each?
- 2. How did you handle money on your last group trip?
- 3. What would bring you to a savings app on a Monday, unprompted?

Hypothesis (deck assumption)	Survey question	Passes if... [A]	If it fails, we...
Core insight: opens are only balance checks or withdrawals	Last reason you opened Jar	≥50% of Jar users say balance or withdraw	Rebuild the diagnosis around the reasons actually given
Near-goal students are the lever	Saving toward something in the next 6 months?	≥60% name a concrete goal	Lead with goal templates for goal-less savers (S2)
20% Y1 adoption	Would use Goal Jars (probably + definitely)	≥40% stated intent (≈20% after halving)	Cut adoption in the model; re-check break-even (21%)
2–3 meaningful opens/week, no pushes	Open frequency; would open with notifications off	≥35% say 2–3×/week AND yes with notifications off	Keep the Sunday Wrap; drop the Monday cadence
Squads drive reactivation	How many friends would you save with?	≥40% choose 1+ friends	Ship solo Goal Jars first; Squads in Phase 2
+30% savings uplift	Would you raise your daily saving to hit the goal?	≥30% say yes	Use the bear-case uplift (+15%)
₹25/adopter/yr boost budget	Smallest weekly bonus that makes you check	≥50% say ₹20 or less	Ask partners to fund larger boosts

Pass thresholds are team judgment [A]. Survey results replace the matching [A] tags in A1 before the pilot starts. The survey is ready as a Google Form. Early evidence without a survey: Play Store review analysis (A7) supports hypothesis 1.

In 6,000 recent Play Store reviews, withdrawal is what users talk about; goals and spins barely appear

SHARE OF DETAILED REVIEWS MENTIONING EACH THEME (%)

56%

of detailed 1–2★ reviews are about the withdrawal moment

≤5%

of detailed reviews name any goal or purpose

1%

mention spins or rewards

SO WHAT

Withdrawal is the one moment Jar's value becomes visible, and it arrives as a loss: 3% GST plus a 2–5% spread [S30]. Goal Jars reframe that moment as goal redemption, with a partner bonus offsetting the spread.

In users' words (Play Store, Aug–Sep 2026)

“I saved ₹7,300 ... when I tried to withdraw my money, I received only ₹6,600”

“Maine isme 11550 jama Keya tha badme nikal te time 10395 he aya”

Method 6,000 newest Google Play reviews of Jar (30 Jul–22 Sep 2026; the app has 2.0M ratings, 4.7★) [S29]. 80% are 5★ but mostly one-liners (median 2 words); the 684 detailed reviews (8+ words) were keyword-coded in English and Hinglish, with samples checked by hand. **Caveats** Reviewers skew towards complaints; not student-only; keyword coding is approximate (goal share is an upper bound). This is directional evidence, not a survey.
